

Supplementary Figure 3. Exemplary scattering curve showing the first sharp diffraction peak (FSDP) at $q_{\text{FSDP}} = 15.2 \text{ nm}^{-1}$. The positions for all scattering curves were determined in the highlighted window $10 \text{ nm}^{-1} < q < 20 \text{ nm}^{-1}$. The inset shows the linearized exemplary scattering curve at low angles. The blue straight fit was extrapolated to $q = 0 \text{ nm}^{-1}$ to extract I_0 .
